

Testing packages available for

COMMERCIAL/HEAVY DUTY

Engine Oil Analysis

TESTS	Kinematic Viscosity at 100°C, cSt
	Glycol
	% Water
	% Fuel
	ICP Spectroscopy (ppm Metal Analysis)

**Can add SOOT to identify contaminants in oil and TBN to identify drain intervals*

Hydraulic Analysis

TESTS	Kinematic Viscosity at 40°C, cSt
	% Water
	% Solids
	ICP Spectroscopy (ppm Metal Analysis)

**Can add TAN to identify intervals, Particle Count to identify ISO cleanliness code, Karl Fisher to identify ppm water*

Transmission Analysis

TESTS	Kinematic Viscosity at 100°C, cSt
	% Water
	% Solids
	ICP Spectroscopy (ppm Metal Analysis)

Gear Analysis

TESTS	% Water
	% Solids
	ICP Spectroscopy (ppm Metal Analysis)

If you are in need of a customized analysis, we can develop a predictive and proactive maintenance program for your unique business needs. Let our OilChek® analysts answer your questions assuring machine health® for the long-term.

BENEFITS OF ROUTINE TESTING

- ✓ REDUCE total cost of ownership
- ✓ IDENTIFY the unique drain interval to your piece of machinery or equipment
- ✓ ESTABLISH a trend history to provide protection from unexpected events
- ✓ RECOGNIZE when oils become contaminated
