

THRIVE® Premium Light Colored Waylubes

Description

THRIVE® Premium Light Colored Waylubes are high performance lubricants for slideways, pneumatic tools, gears and other types of applications requiring a tackiness additive.

THRIVE® Premium Light Colored Waylubes are formulated from different additive packages than conventional way oil lubricants which are manufactured from sulfur-lard oil chemistry. Therefore, these light colored products, have low odor and separate from coolant readily.

THRIVE® Premium Light Colored Waylubes will not plug Bijur filter units, which has been a problem with conventional way lubricants for years.

THRIVE® Premium Light Colored Waylubes control stick-slip, provide high film strength properties, contains extreme pressure additives, as well as rust and oxidation inhibitors to protect equipment, and extends longevity of service.

Features/Benefits

- Excellent slideway performance
- Eliminates chatter
- Excellent thermal stability
- Excellent rust inhibition
- Non-staining
- Premium Demusibility

Typical Properties			
Product Name	1132	1168	11220
ISO Grade	32	68	220
Viscosity @ 40° C, cSt	32	68	220
Viscosity @ 104° F, SUS ref	140-160	310-360	900-1100
Viscosity Index, typ	95	95	95
<i>Performance:</i>			
Cincinnati Milacron Spec Number	P-53	P-47	P-50
