

Synthetic All Season Hydraulic Oils

Synthetic All Season Hydraulic Oils are high viscosity index synthetic hydraulic oils formulated to meet the requirements of major hydraulic equipment manufacturers. They are designed to outperform conventional oils by controlling varnish and flowing better at low temperatures while resisting viscosity loss at high temperatures. In many situations, a single viscosity grade can be used year round.

These hydraulic oils exceed seal compatibility requirements for Denison HF-0 and DIN 51524 for longer seal life.

Features/Benefits

- High viscosity index extends operating temperature range
- Low pour points and Brookfield viscosity improve cold temperature operation and reduce pump cavitation
- Strong varnish control properties and oxidation resistance improve system reliability
- Zinc-based anti-wear protects pumps and motors from wear
- Shear stable viscosity delivers consistent performance and protection
- Controls foam and quickly releases air for responsive hydraulics
